PROJECT

Machine Learning

1. Objective

The goal of this project is to select, design, and implement (a) machine model(s) as a solution for a particular task/problem.

2. What to Do

Dataset

- Select or build a dataset on any topic. You can use publicly available datasets, e.g., from Kaggle (https://www.kaggle.com)
- Bonus points will be given if the data is related to Cambodia and/or if you construct your own dataset.

Machine Learning Models

- Propose a machine learning model (or multiple models) of your choice
- Train and evaluate the models using the dataset selected/constructed
- Conduct a comparative study of all proposed models (in the case where you propose multiple models or you can compare your model with the existing methods in the literature)
- Discuss the results obtained from your experiments

3. What to Submit

- Source code (well commented)
- Technical report (the template is provided, max 4 pages)

4. Key Dates

- Project Start Date: 18 Feb 2026
- Project Deadline: Mar 2026
- Presentation Date: TBD
